

Creating a Tour in Google Earth

1. Create a folder with several placemarks that your audience will visit, and save the folder as a .kmz file.

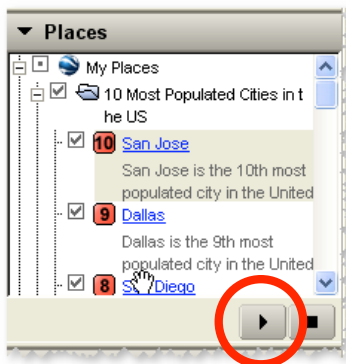

To change touring settings, to go Tools>Options.

2. On the touring tab, change the Fly-To Speed and Tour Speed to suit your preferences. Pause the tour long enough to allow your audience time to read the information contained in the balloon. Be sure to

check the box that allows the balloon to pop up when the tour is paused. This option is not available in earlier Google Earth versions. Make sure you have downloaded the latest version of Google Earth. When you have made your changes, click Apply Settings.

To take the tour, click on the Play button at the bottom of My Places. As the tour visits each of the placemarks, it will pause to display the descriptive balloon associated with each placemark, then go on to the next placemark.
